About the American Beliefs Study Reports

The American Beliefs Study provides a projection of likely religious beliefs, preferences, and practices for a defined study area. This report is based on the American Beliefs Study national survey, which MissionInsite conducts every five (5) years. While general religious data is available through various organizations, only MissionInsite can provide current local geography projections. This report is based upon the 2021 American Beliefs Study Survey.

The 2021 American Beliefs Study Survey series contains two reports. **ReligiousInsite** provides insights into community beliefs and religious preferences. **MinistryInsite** focuses on practical applications of the 2021 survey. It includes life concerns, reasons for non-participation (or considered nonparticipation) in a religious congregation or community, and a list of preferred ministries or programs. These are based on the specific study area. Customized priority address the study area’s concerns, program and ministry preferences and more.

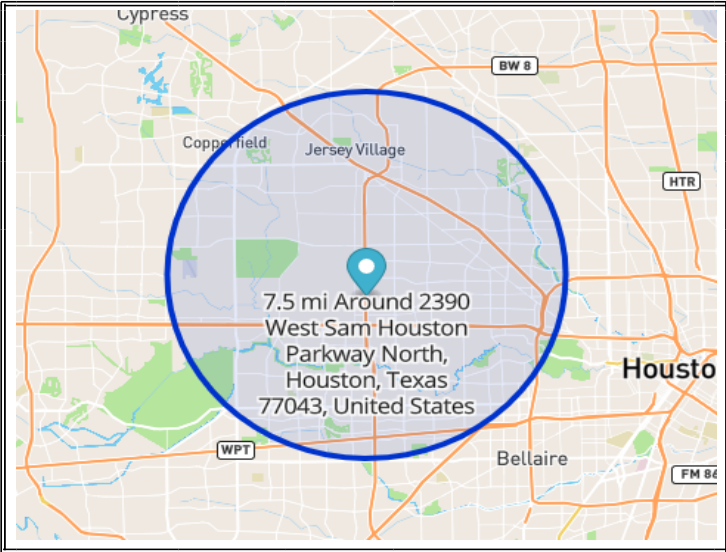

The **ReligiousInsite Priorities** Report and **MinistryInsite Priorities** Report capture the priorities of some survey questions based upon strengths of beliefs plus the direction of the beliefs, whether towards agreement or disagreement. These two reports correspond to the full reports.

Contents of the ReligiousInsite Report

How to Read the Different Report Types

Four windows provide insight into the respondent’s answers.

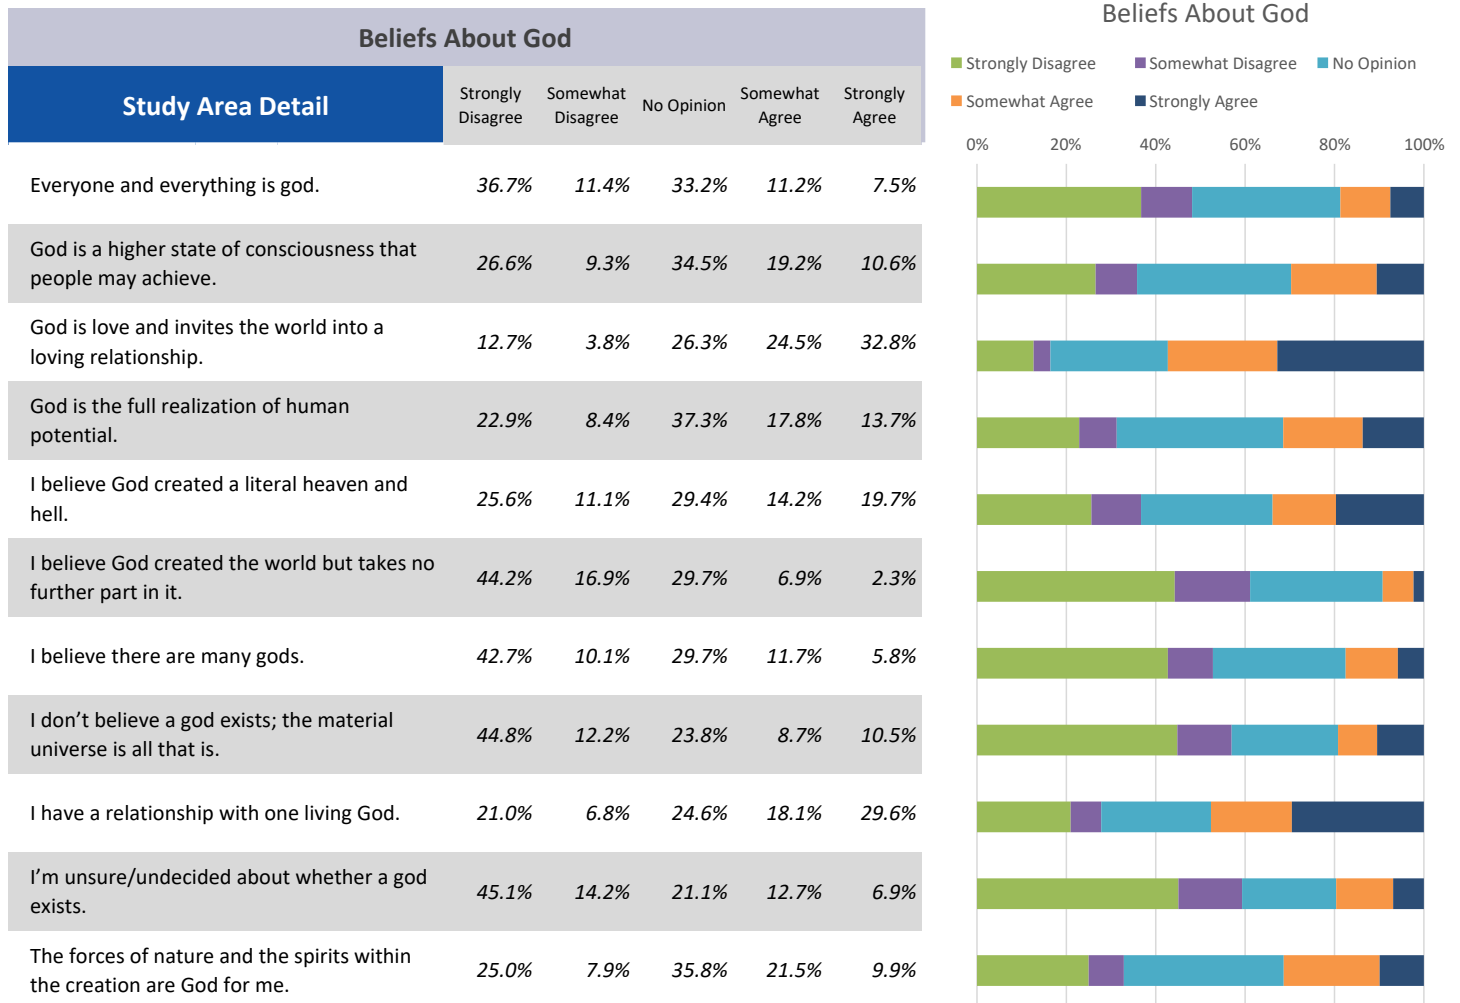

- Window #1:** Reveals the detailed responses across all options.
- Window #2:** Compares the study area responses to national average responses. For more details, see the last page.
- Window #3:** Compares data between this survey and previous surveys to reveal trends.
- Window #4:** Provides prioritized lists of the topic. This window is only available on certain topics and after applying analytics.

Hint: This chart displays general trends in social and moral beliefs. It calculates the distance between the "agrees" and the "disagrees". If the boxes display to the left, it means the general trend is to disagree. If they display to the right, the trend is to agree. The longer the bars are, the stronger the trend in either direction. The graph also compares the study area to the national average on each belief.

Hint: This report compares answers on the 2017 and 2021 American Beliefs Study surveys and shows changing trends on these social and moral belief statements, if any. The chart displays the distance between the 2017 and 2021 statements. The longer the bar, either positive or negative, the greater the shift in agreement.

Trends in Social and Moral Beliefs Between 2017 & 2021

Hint: What does this graph show? It compares the change in agreement between the 2017 American Beliefs Study Survey and the 2021 American Beliefs Study Survey for this study area. (It is not a comparison to the national profile.) Look for significant swings in either direction.

Faith and Religious Involvement

Faith is a dynamic factor in many people's lives. It grows and declines, and the level of active involvement changes as well. The Faith and Religious Involvement variables use several vantage points to provide an understanding of your study area's faith and involvement.

Activity in a Religious Congregation or Community

Study Area Compared to National Average

	Study Area	US Average	Comparative Index
Involvement			
Projected percentage involved	27.8%	35.4%	79
Projected percentage NOT involved	72.2%	64.6%	112
Estimated change of those involved over prior 10 years (point change)	-8.3	-8.9	

Hint: This table presents the percentage of the population in the study area likely to either be involved or not be involved in a religious congregation or community. It also compares these two data points to the national average.

Also, consider the Estimated (point) Change over 10 years. This looks at how respondents answered the question about involvement both currently and 10 years ago. If this number is negative, it means it is likely that the level of involvement is declining in the study area. You can compare this to national changes.

	Study Area	US Average	Comparative Index
--	------------	------------	-------------------

Directional Change in Involvement

	Study Area	US Average	Comparative Index
Percent likely to have become active	3.5%	3.8%	92
Percent likely to have ceased to be active	11.8%	12.7%	93
Percent likely to have made no change	84.7%	83.5%	101
Net Change in direction of activity	-8.3	-8.9	

Hint: This table reflects how respondents answered a question about activity in a religious congregation or community. If they were involved 10 years ago, but not today, this is reflected in the "Percent likely to have ceased to be active" column. If they were not active 10 years ago, but are now, this is reflected in the "Percent likely to have become active" column. The net change in direction of activity displays the direction the religious activity is moving. If the number is red, more individuals have stopped being active than have become active. You can also compare the study area to the national average.

Change in the role of religious faith over 10 years:

No Change in Significance	2.9	2.2	136
Minor Change in Significance	-1.4	-1.3	102
Moderate in Significance	-2.2	-2.9	75
Considerable in Significance	-1.6	-1.0	165
Greatest Change in Significance	2.2	3.0	72

Hint: This survey asked respondents to compare how significant their faith is now to 10 years ago. If a number is red, faith significance declined. If a number is black, faith significance increased. If Considerable in Significance and Great Change in Significance are positive, faith has become more important to your study area. The graph compares your study area to the national average.

Supporting Information

Interpreting the Report

The American Beliefs Study reports help you interpret data at a glance.

Comparative Indexes: All variables have a column called Comparative Index, which compares your study area with a larger area. For this report, all comparisons are with the national averages for the data item.

- Indexes of 100 mean the study area variable is the same as its base area.
- Indexes greater than 100 mean the study area variable is above the base area. The higher the number, the greater it is above the base.
- Indexes less than 100 mean the study area variable is below the base area. The lower the number, the greater it is below the base.

Color Coding: The Comparative Indexes columns are color coded so you can easily spot changes and the direction of change.

Index: Above Ave Ave Below Ave.
